| Description | | | |
| <p>The coreboot ME test application doesn't detect intel sunrise management controllers which show as follows with lspci:</p> <p>Communication controller: Intel Corporation Sunrise Point-H CSME HECI #1 (rev 31)</p> <p>The ID is 8086:a13a. I've manually changed one of the existing entries in the .h file to a13a, compiled the tool and tested it and it correctly detects the ME device and can get some information from it although the latter part of the capabilities seems to have a lot of problems and times out most of the time.</p> | | | |
