

coreboot - Bug #136

kernel panic when poweroff after s3 resume in Arch Linux Live CD

08/20/2017 07:02 AM - Iru Cai

Status:	New	Start date:	08/20/2017

Target version:			
Description			
<p>Make archlinux-2017.08.01-x86_64.iso to USB, use it to boot, then run <code>systemctl suspend</code>, resume, then run <code>poweroff</code>, kernel panic will happen.</p> <p>It affects some systems, but some are not affected. It happens on the latest coreboot revision (e09cd1b7) and some very old revision.</p> <p>It only happens in Arch Live USB, but not in Arch running on disk.</p>
