<b>Description</b>			
In Kconfig, going to <i>Mainboard</i> , and choose <i>Google</i> boards. The board names are not sorted, and therefore hard to locate.

- Category set to *build system*

These are the variant boards. The board names are sorted by the directory they're in, then by the order within the Kconfig file. There's no practical way to sort these.

The only option I see is to create a subdirectory for each variant under the google directory, and put just the Kconfig.name file in that directory. That's a terrible solution, and I think that we can live with the unsorted boards, even though it's annoying.

Closing as won't fix. Sorry.
