

coreboot - Feature #76

Let abuild work from config files instead of deriving everything by itself

09/27/2016 05:48 PM - Patrick Georgi

Status:	New	Start date:	09/27/2016
Priority:	Normal	Due date:	
Assignee:	Martin Roth	% Done:	0%

Target version:			
Description			
This allows adding multiple build variants for a single board, eg. with/without native video init, fsp1.1/fsp2, ...			
Things to keep in mind:			
* The builds need a distinct label for their build directories and test results			
* abuild needs to check that all boards had at least one build (eg. by "crossing off" a list of boards it generates), so we don't miss boards by accident
