

coreboot - Bug #81

Unable to build coreboot with any payload other than SeaBIOS

10/22/2016 10:44 AM - Philipp Stanner

Status:	New	Start date:	10/22/2016
Priority:	Normal	Due date:

Target version:			
Description			
<p>Hi. After compiling (worked) I can successfully build a coreboot.rom for qemu (x86 i440fx) - as long as I use the standard-payload. Any other payload (Grub, filo, linux kernel, u-boat etc.) results in a demolition.</p> <p>I proceeded as described in https://www.coreboot.org/Lesson1, one time with, one time without building the payload manually.</p>			

History

I just tried this on Debian Jessie and everything worked fine with filo for me. However, I had to install the package

dh-autoreconf

before compiling.
